

Formal Approaches to Metaphysics

18.09 - 20.09.2024

There is a rich tradition within metaphysics that uses formal methods to shed light on metaphysical questions – for example, questions concerning essence, grounding, properties, possibility, mereology, and arbitrary objects. The growing body of work on higher-order metaphysics is just one of the most recent examples. The goal of this conference is to bring together researchers working with a broad range of formal methods on a broad range of metaphysical topics. Our hope is that this will encourage a fruitful cross pollination of ideas.

Speakers

- Aaron Cotnoir (University of St. Andrews)
- Rafael De Clercq (Lingnan University - Hong Kong)
- Peter Fritz (University College London)
- Leon Horsten (University of Konstanz)
- Hannes Leitgeb (Ludwig Maximilians Universität - München)
- Jon Litland (University of Texas - Austin)
- Andrea Lupo (University of Lugano)
- Beau Madison Mount (Oxford University)
- Carla Peri (University of Padua)
- Sam Roberts (University of Konstanz)
- Gabriel Uzquiano (University of Southern California)
- Lisa Vogt (University of Geneva)
- Xinhe Wu (London School of Economics & Political Science)
